

ABSTRACT

1 A reticle manipulating device with an at least
2 substantially closed housing for maintaining clean-room
3 conditions inside the housing, an input/output station
4 for introducing and discharging reticles in and out of
5 the housing, and at least one functional unit arranged in
6 the housing for impressing a predetermined function on
7 the reticles. The device has a manipulating device also
8 arranged inside the housing, for manipulating the
9 reticles in the housing.
